

Creating Wildlife Habitat in Your Backyard

- 300+ species in Australia depend on hollows for their home.
- Due to environmental degradation of our natural ecosystems, the protection and habitat restoration of native flora and fauna is becoming ever more important.
- Creating tree cavities (habitat hollows) or installing nest boxes is popular with homeowners and councils as an alternative to tree removal, and to restore habitat.

The Tree Company

- We are excited to partner with Thermal Haven Nest Boxes®.
- We offer supply and installation of these eco-friendly, durable nesting boxes.
- We provide consultation and advice on **habitat creation**.
